Subject: Letter of Intent

Dear Leng,

The purpose of this communication is to affirm my intention to collaborate with your company by developing opportunities to increase each other's market share and ultimately profitability. This Letter of Intent comes following the successful launch of the Makers Depot Innovation Center in the Orange County Great Park in conjunction with the Department of Energy's Solar Decathlon. The event generated over 100,000 attendees and several million of media impressions. Notable among these was a favorable article in the Orange County Register describing the vision and upcoming plans for the Makers Depot in the City of Irvine.

As founder of the Makers Depot I wish to sincerely thank you for your involvement and support to-date in displaying your wonderful reef aquarium at our gallery exposition. It was a major attraction during the Solar Decathlon and served as a backdrop for various broadcast interviews of visiting dignitaries, including the City of Irvine's Mayor and City Council.

Following the Solar Decathlon, Makers Depot was converted from a gallery exposition on sustainable technologies to an Innovation Center. Maker Depot corporate sponsors include Stratasys, the 3D Printing giant, and Autodesk, the leading software publisher of AutoCAD applications. We were fortunate to also count your company among our corporate partners, and were delighted to feature your company's Reef Aquariums in our gallery. As a result of their popularity, public classes on Reef Aquariums are now being offered at Makers Depot, with plans to expand classes to also include your eco-friendly, marine farming systems.

Makers Depot is also working with the Southern California's leading educational institutions, including the University of California Irvine and San Diego, as well as various community colleges and the Orange County Department of Education, which serves over 500,000 students in Orange County. Makers Depot is developing classes to help these students realize their dreams, as they transform themselves into the inventors and leaders of tomorrow. I look forward to discussing details of how your company can work with us as we continue develop new exhibits, classes, and other opportunities for collaboration.

Sincerely,

Thomas Grimm
Founder, Makers Depot
